# ASSEMBLING USE AND MAINTENANCE SPARE PARTS LIST

**FSP 100/150**

# 1 - FOREWORD

1.1 This manual is an integral part of the machine and contains information necessary for its operation and maintenance.

Operators and maintenance staff are advised to read the manual before using the machine or carrying out any maintenance.

This booklet, or a copy of it, must always be available for the operator to consult.

For any further information please contact the manufacturer.

1.2 Take care when you see this symbol: it indicates the operations which are dangerous.

\*

1.3 This is a sign for a note or warning.

## 2 - IDENTIFICATION LABELS

2.1 The identification label of the machine carrying all identification details is positioned on the protective casing . (Fig.1 pag. 7 ).

2.2 The labels in (Fig.2 pag.7) are applied to the hopper, frame and casing as shown in (Fig.3 pag. 7 ).

### 2.3-DESCRIPTION OF THE LABELS

1- Warning: before carrying out any maintenance, remove the ignition key from the tractor and read the instruction and maintenance manual.

2- Warning, remain at a distance. Danger from scattered product.

3- Warning: read the instruction and maintenance manual carefully.

4- Always use protective goggles and wear protective gloves.

5- Warning: keep hands away from rotating parts while the machine is operating.

6- This indicates the rotation speed in r.p.m.

Both the labels and the danger symbols must always be clean and in good condition; if necessary, replace with other originals available on request from the manufacturer.

## 3 - WARRANTY

The warranty is valid for 6 months from the date of purchase. The warranty is no longer valid in the event of the machine being improperly used. The warranty is no longer valid if the instruction in this booklet are not respected, if any changes are effected or spare parts which are not originals fitted.

## 4- DESCRIPTION OF THE MACHINE

This is a spreader with centrifugal action for dry or damp granular or non-granular materials, to be towed by a tractor or self-propelled vehicle. The centrifugal action is generated by the rotation of a disc with four blades positioned on the circumference.

### 4.1 MACHINE PARTS

The machine is essentially composed of: (Fig.4 pag.. 7 ):

- SPREADING DISC EQUIPPED WITH BLADES..... 1
- FRAME WITH DRAWBAR..... 2
- LOADING HOPPER..... 3

## 5- ACCIDENT PREVENTION REGULATIONS

### 5.1 HOW TO AVOID ACCIDENTS

\* In order to avoid accident it is necessary to pay attention to the indications on the labels applied to the machine and read this manual carefully.

Always take care that there are no animals or people (especially children) within the range of action of fertilizer spreader.

- \* Always wear well-fastened, tight-fitting clothes, sturdy safety footwear, protective gloves, a mask and goggles if powdered fertilizer is being spread, especially in windy weather.

When the machine is at a standstill, switch off the motor and apply the parking brake.

**Never carry out maintenance while the machine is operating.**

- \* When circulating on roads it is necessary to respect the highway code in force in that particular country.  
Transporting people is prohibited both when working and during transfers.  
Acoustic level below 70dB.  
Always remember that a careful operator is the best safety device to prevent any kind of accident.

## **6 - USE OF THE MACHINE**

The machine can be attached to any type of self-propelled vehicle or tractor which is sufficiently powerful.

### **6.1 MACHINE OPERATION**

The machine must only be started up in the open and when there is enough visibility to see the distance to which the product is being spread.

### **6.2 PROHIBITED USES**

The hopper must never be loaded with wet products as these could clog the machine. Never use the fertilizer spreader to scatter stones or other objects.

- \* The fertilizer spreader must never be used by employees under the age of eighteen.

### **6.3 LOADING**

Before loading the hopper the self-propelled vehicle or tractor must be switched off and the parking brake applied.

- \* It is advisable for the same operator to load the hopper after having switched off the tractor motor.

### **6.4 REGULATING THE QUANTITY SUPPLIED**

The quantity of product scattered can be increased or decreased by means of the opening lever. The quantity is increased by pushing the lever downwards and decreased by pulling it upwards, until the supply is shut off. (Fig.5 pag. 8)

### **6.5 DISC WITH ADJUSTABLE BLADES**

According to the specific weight of the fertilizer to be spread, it is possible to direct the blades by moving them in the special clamps from N° 1 to N° 5, to obtain even scattering to the right and left. The blades are normally in position N° 3. By moving the blades towards N° 1 the scattering range to the left of the driver is increased. By moving them towards clamp N° 5 the scattering range to the right of the driver is increased. (Fig.6 pag. 8)

## 7- ASSEMBLING THE FERTILIZER SPREADER (Fig.7 pag. 8)

Operators must take great care over this operation.

\*

Use protective gloves and suitable tools in good condition.

- A- Assemble shafts 3-4 and 5 on the transmission unit, with the same rotation direction as shown in the drawing.
- B- Fix the transmission unit 1 to the frame 2.
- C- Fix the drawbar 6 to the frame 2.
- D- Fix the tie-rod 7 and the casing P to the frame 2.
- E- Fit the disc 8 on the central transmission shaft.
- F- Fix the fertilizer opening lever 9 to the bow on the frame 2.
- G- Fit the space washer 10 on the unit axle .
- H- Fix the wheels 11 to the unit axle.
- I - Fit the agitator guide bushing in the hopper cone, with the doser disc, the sealing washer and the snap ring. (N°14) .
- L- Introduce the agitator 15 into the central hole in the hopper 17 and fix it to the shaft 5; fit the casing 16 on the attachment holes of the hopper and fix the hopper to the frame 2.
- M- Connect the opening tie-rod 18 to the doser disc and the opening lever 9.

### 7.1 CONNECTION TO THE TRACTOR

Fasten the drawbar to the tractor using the special pin. (Fig.8 pag. 9)

## 8 - ACCESSORIES

The fertilizer spreader can be equipped with the following accessories:

- MANUAL TOWING KIT
- SALT AND SAND SPREADER CONE

### 8.1 MANUAL TOWING KIT

This accessory allows the fertilizer spreader to be easily manoeuvred once it has been detached from the tractor. (Fig.9 pag. 9)

### 8.2 SALT AND SAND SPREADER CONE

This is composed of a steel cone section with two adjustable side supports which hook onto the frame. By varying the height of the cone the scattering range is regulated, making it possible to scatter the product over the area beneath the hopper. (Fig.10 pag. 9)

## 9 - MAINTENANCE

- \* All maintenance operations must be carried out by skilled personnel strictly adhering to the instructions given in this booklet.

Before carrying out any maintenance disconnect the spreader from the tractor.

- \* Always clean the work area before carrying out any maintenance or checks. Use suitable tools in good condition and wear protective gloves.

## **9.1 ORDINARY MAINTENANCE**

Before starting work, check that there are no foreign bodies in the hopper. Wash the machine and dry with compressed air every time after use

## **9.2 PROGRAMMED MAINTENANCE**

Every 50 hours:

- Check that the screws are tight.
- Grease moving parts.

# **10 - STORAGE**

At the end of each season, or in the event of long periods of disuse it is necessary to:

- Wash and dry the machine thoroughly.
- Carefully check and replace any worn or damaged parts.
- Tighten all bolts.
- Grease well in order to avoid rusting.
- Park the machine, in a closed area if possible, and cover it over, after having blocked it to avoid accidental movement or tipping.

Only the user will benefit from finding the machine in perfect condition after a period of disuse.

# **11- TRANSPORTING THE MACHINE**

The machine is supplied disassembled and packed in cardboard and polythene; therefore read this instruction and maintenance booklet carefully.

Dispose of the packing properly in binds provided for this purpose.

# **12- THECNICAL SPECIFICATIONS**

## **12.1 OVERALL DIMENSION**

MODEL	HEIGHT	WIDTH	WEIGHT	CAPACITY
FSP 100	3' 3" 3/8	2' 9" 1/2	100 LBS	26 GAL.
FSP 150	3' 5" 3/8	2' 9" 1/2	135 LBS	38 GAL.

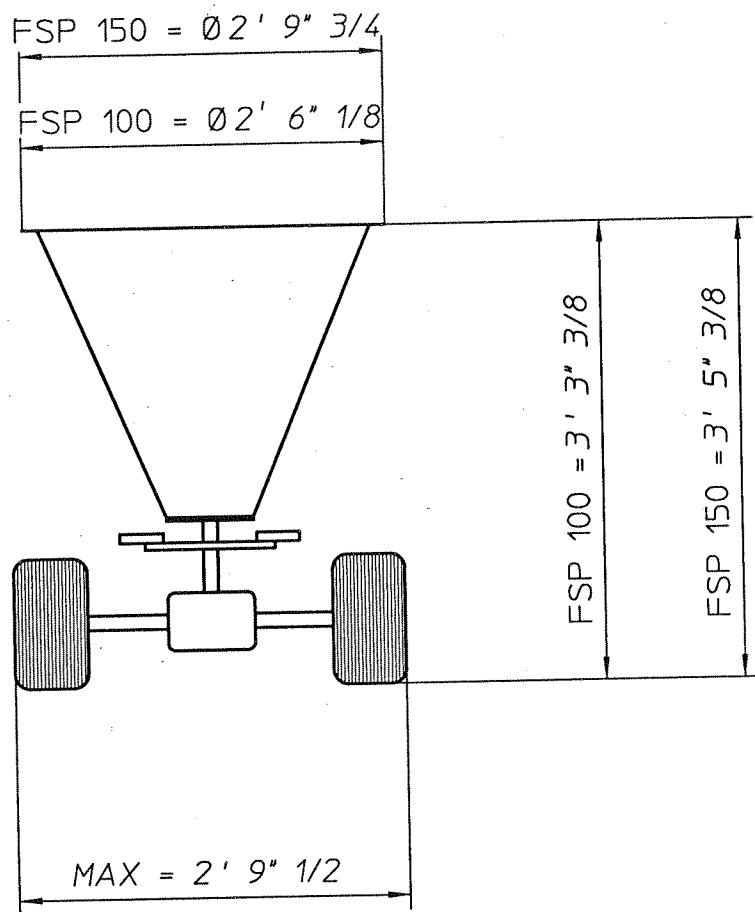

## 12.2 TECHNICAL DATA

### -REQUIRED POWER

For all models..... 3 Kw

### -SPREADING RANGE

2-6 m. according to the speedy and the type of fertilizer

## 13- DISPOSAL OF THE MACHINE

Take the machine to a wrecker at the end of its life-span; do not discard any part of the machine into the environment. It could pollute the environment in which we live and become a hazard to anyone coming into contact with it.
