Warranty

The manufacturer warrants new machinery to be free from defects in material and workmanship at the time of delivery to the original purchaser if correctly set up and operated according to this Operator's Handbook.

The manufacturer undertakes to repair or replace free of charge any defective part which should be returned by the purchaser (freight prepaid) and found to be defective on inspection authorised by the manufacturer during the warranty period.

This warranty shall be valid for 12 (twelve) months from the delivery of the goods to the original purchaser.

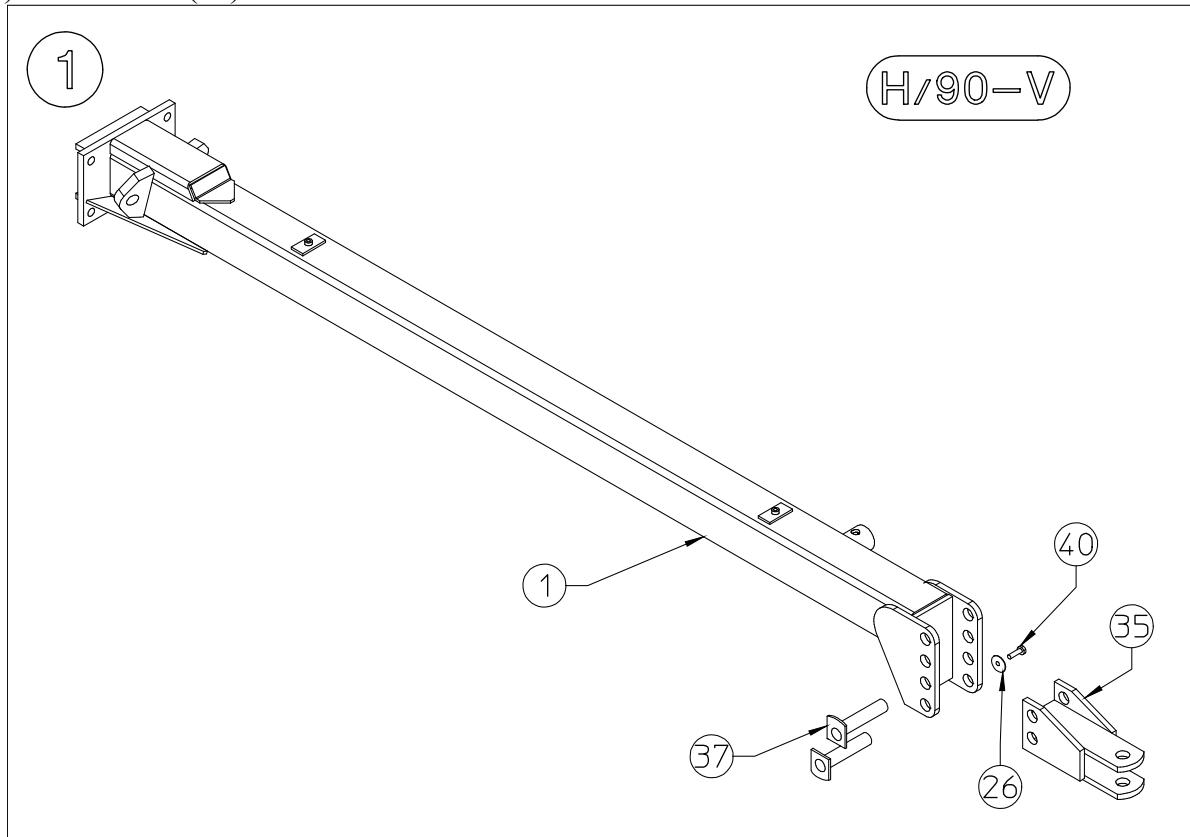

If the customer is unable to return the defective part to the manufacturer, the manufacturer cannot be held responsible for any cost due for repair or replacement of any part of the machine. He shall only supply the part(s) required for such repair and/or replacement.

The warranty shall be considered null and void when it is evident that the machine has been improperly used or at least repaired without authorisation.

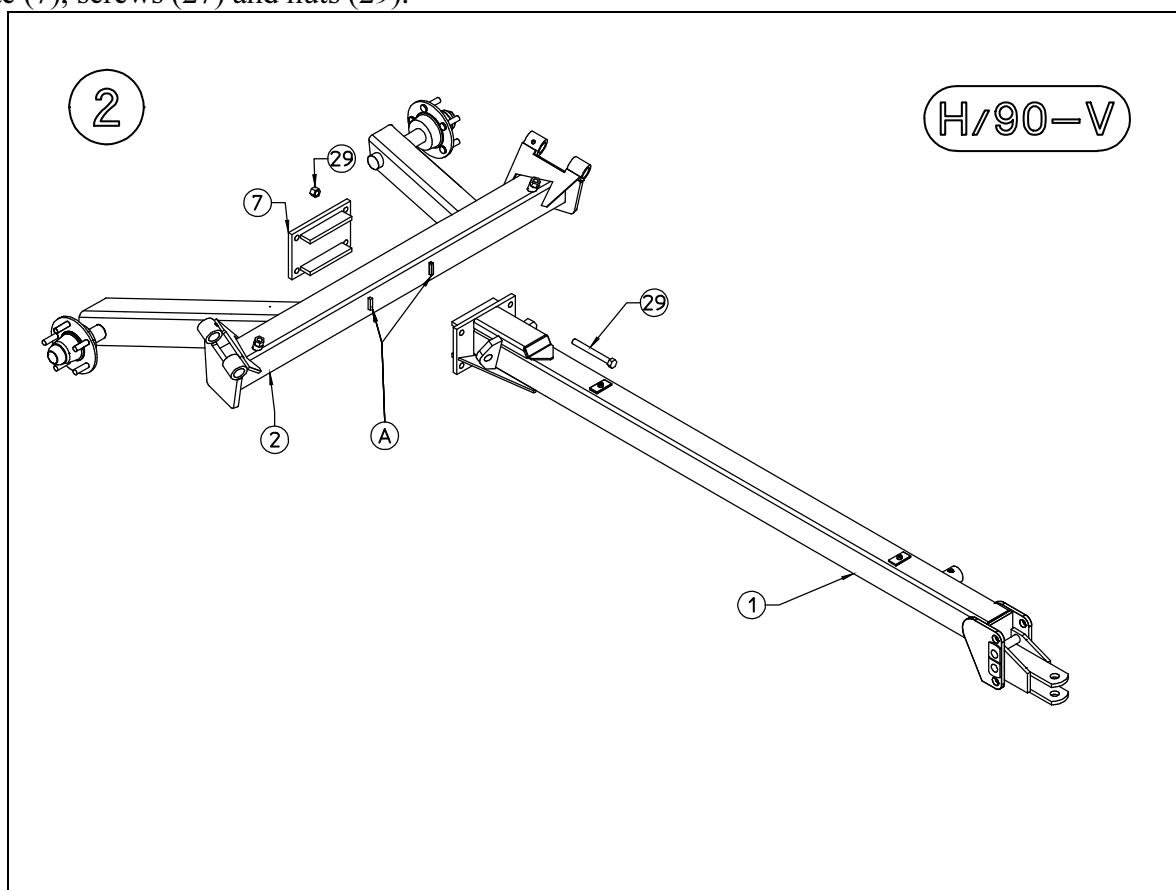

The manufacturer shall not be held responsible for any obligation or agreement reached by any employers, agents or dealers who do not comply with the above warranty. The manufacturer cannot be held responsible for the subsequent damages. This warranty replaces any other warranty, either explicit or implied, as well as any other obligation of the manufacturer.

ASSEMBLY

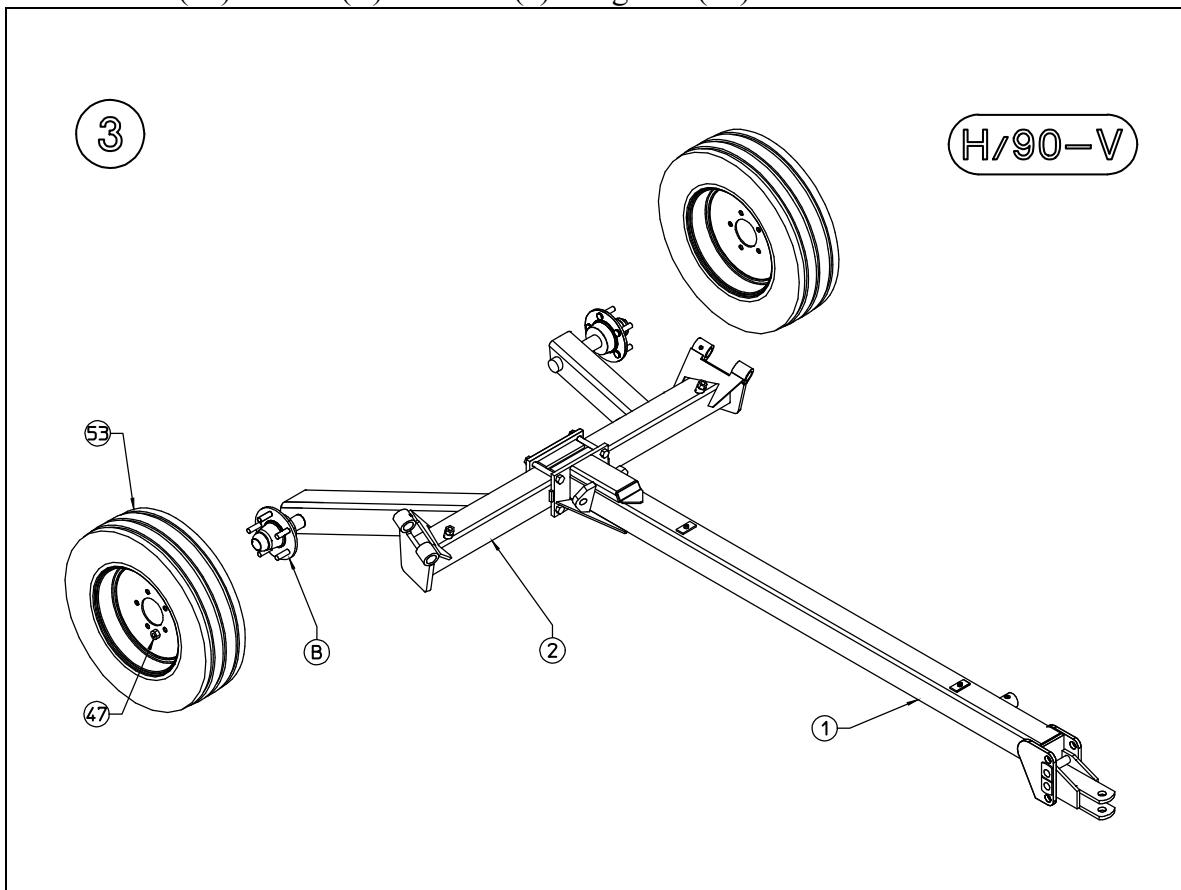

- 1) Attach the tractor hitch (35) to the drawbar (1) using the two pins (37), fastening with the screws (40) and washers (26).

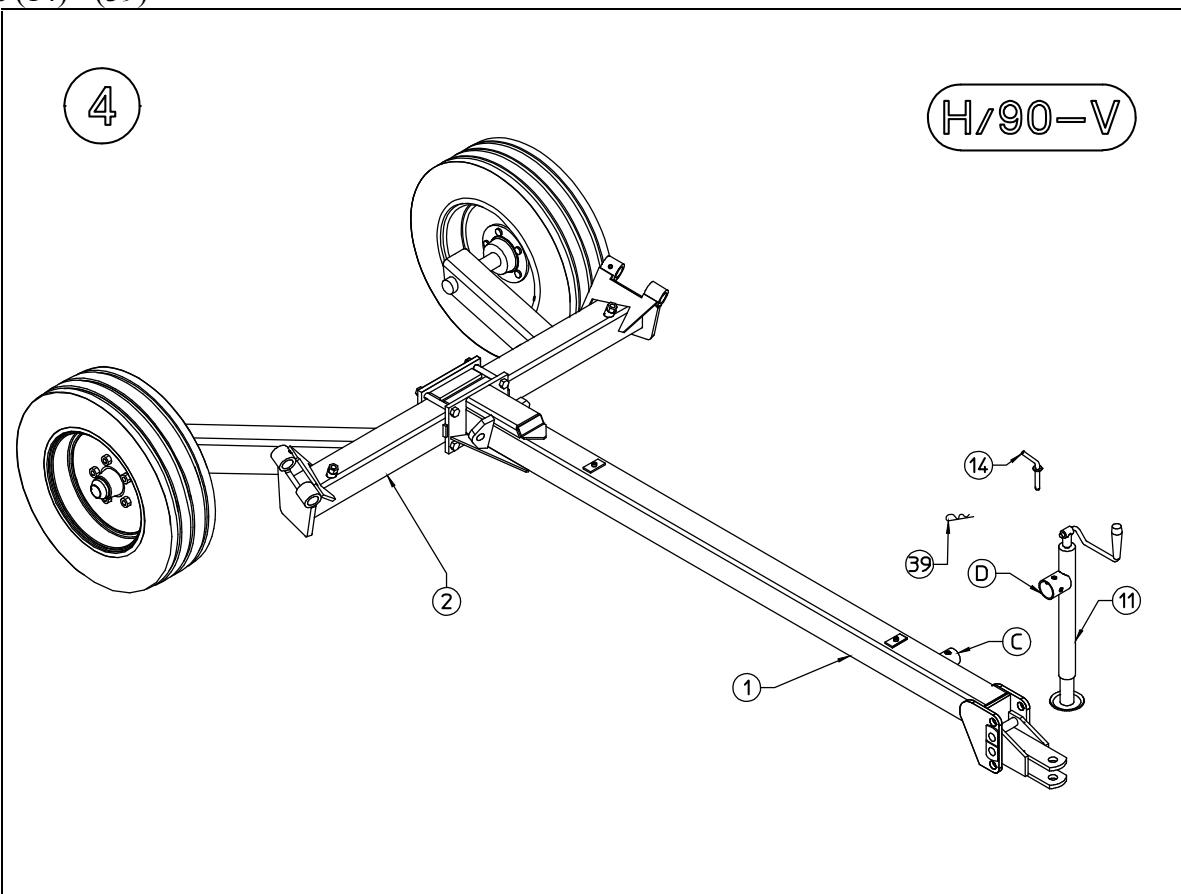

- 2) Attach the drawbar (1) to the frame (2) centering it between plates (A) and fastening it with the plate (7), screws (27) and nuts (29).

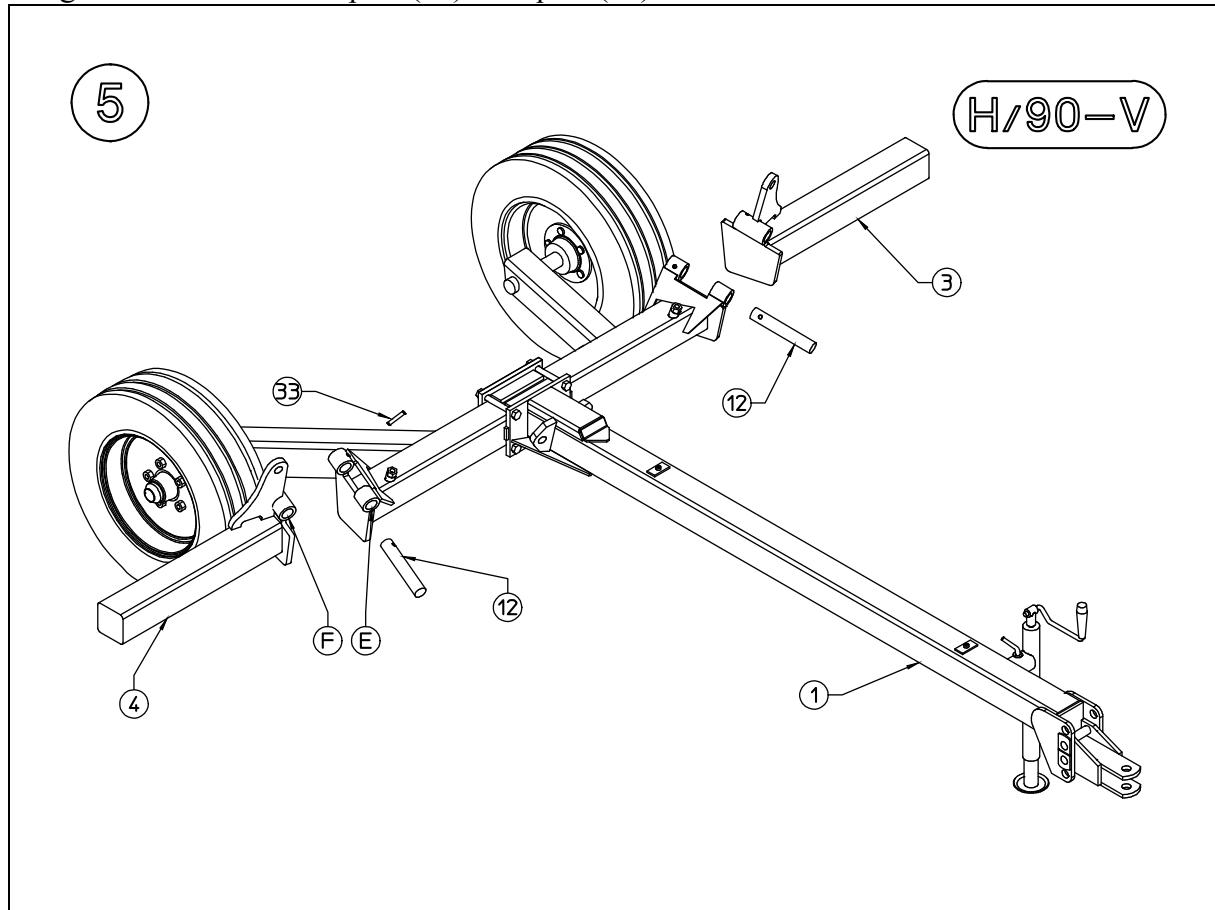

3) Mount wheels (53) to hubs (B) on frame (2) using nuts (47).

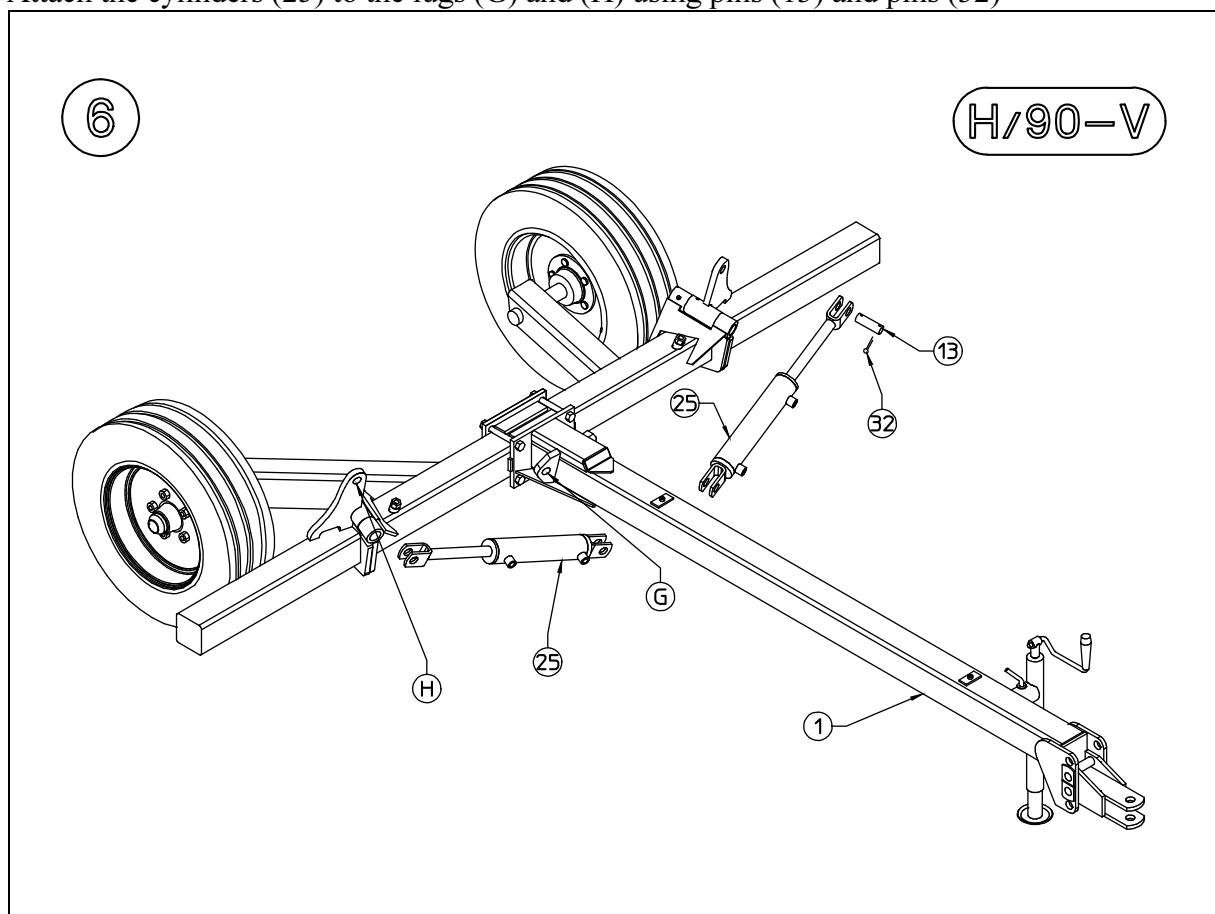

4) Attach mount (D) of the drawbar parking stand (11) to pin (C) on drawbar (1) and fasten with pins (14) - (39)

5) Insert pins (12) into holes (E) on the cart and holes (F) on the arms (3) - (4), so that arms (3) - (4) are hinged to the cart. Fasten pins (12) with pins (33).

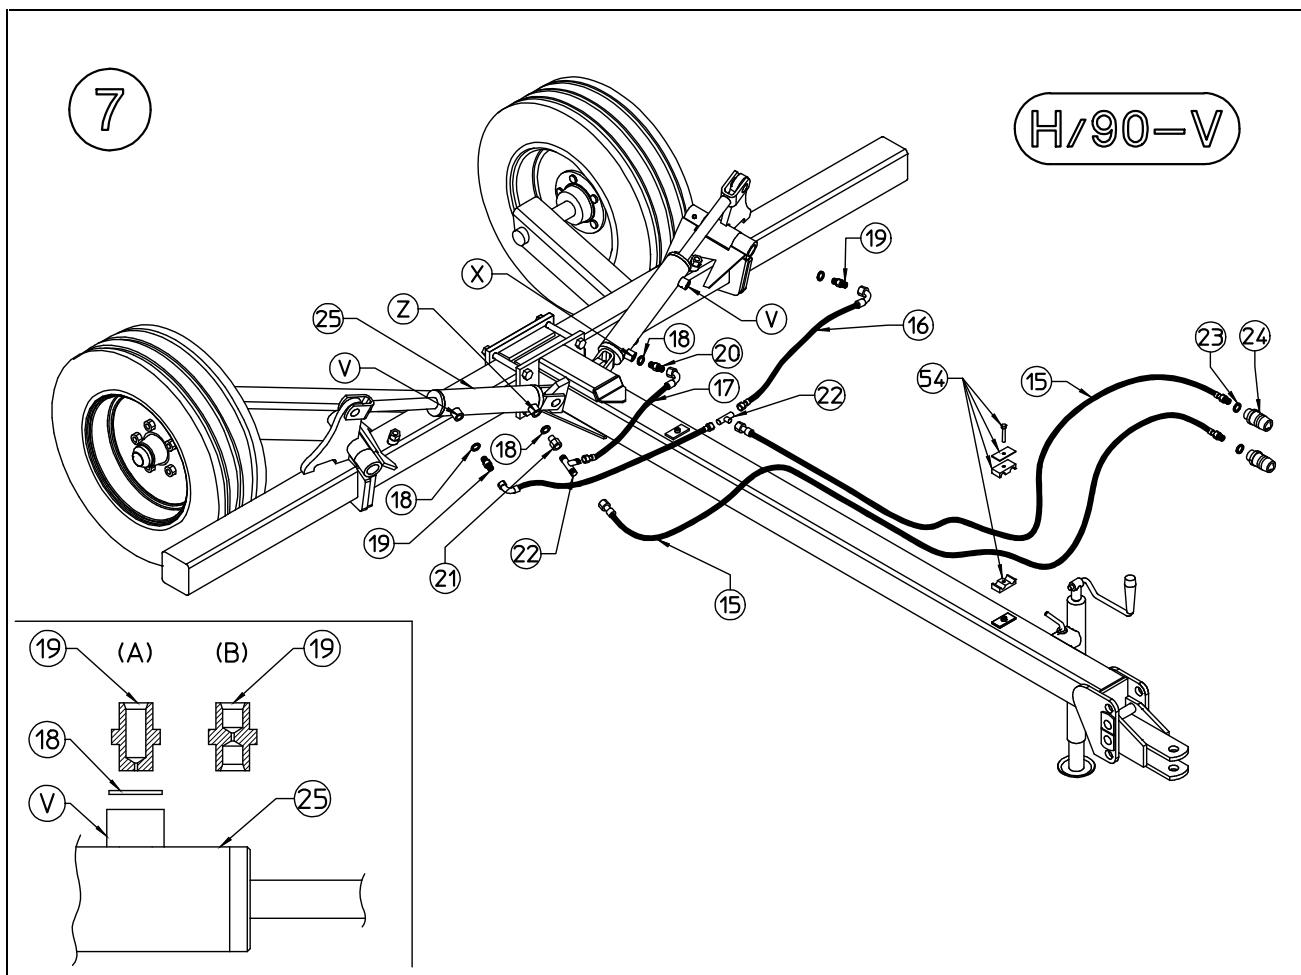

6) Attach the cylinders (25) to the lugs (G) and (H) using pins (13) and pins (32)

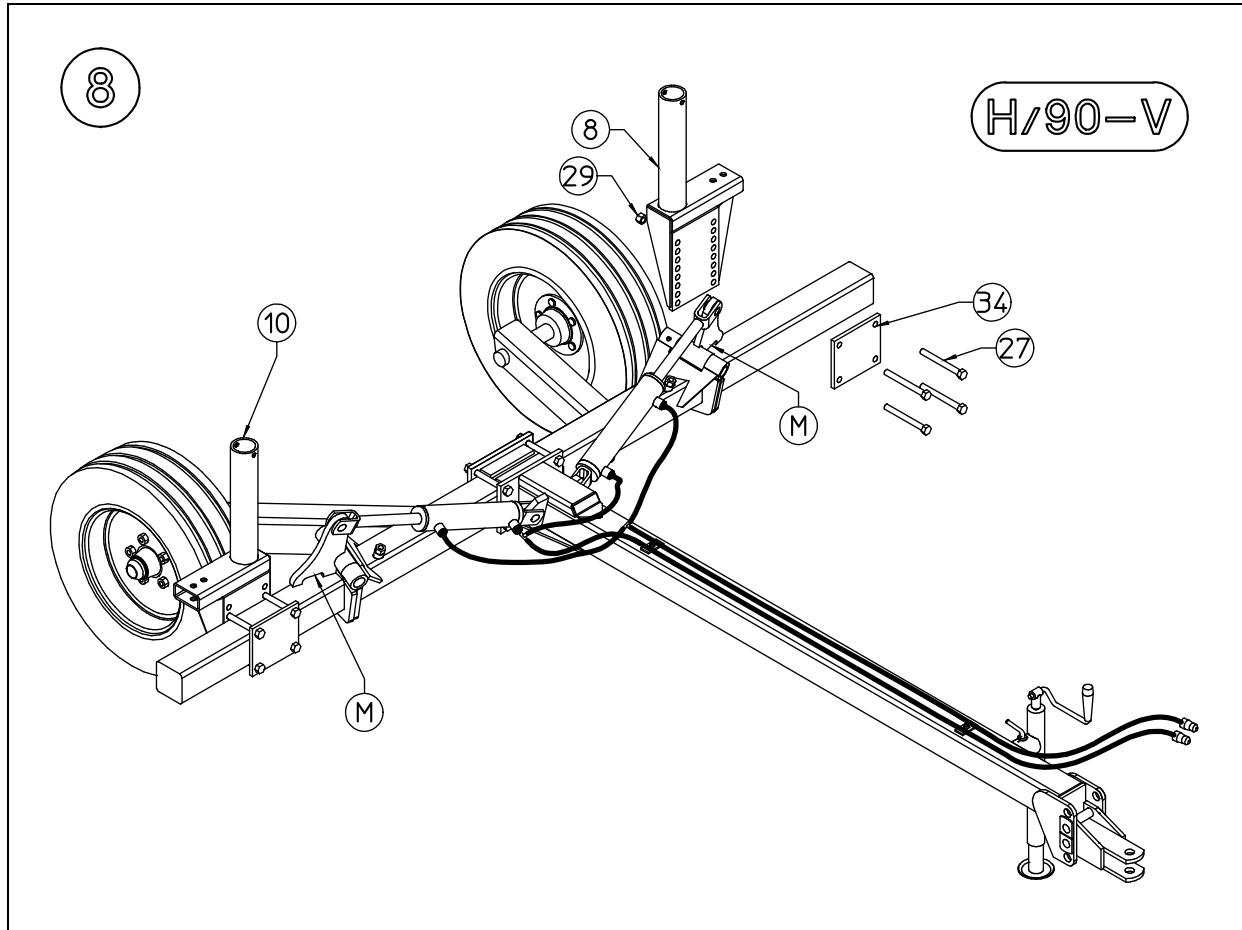

HYDRAULIC SYSTEM ASSEMBLY

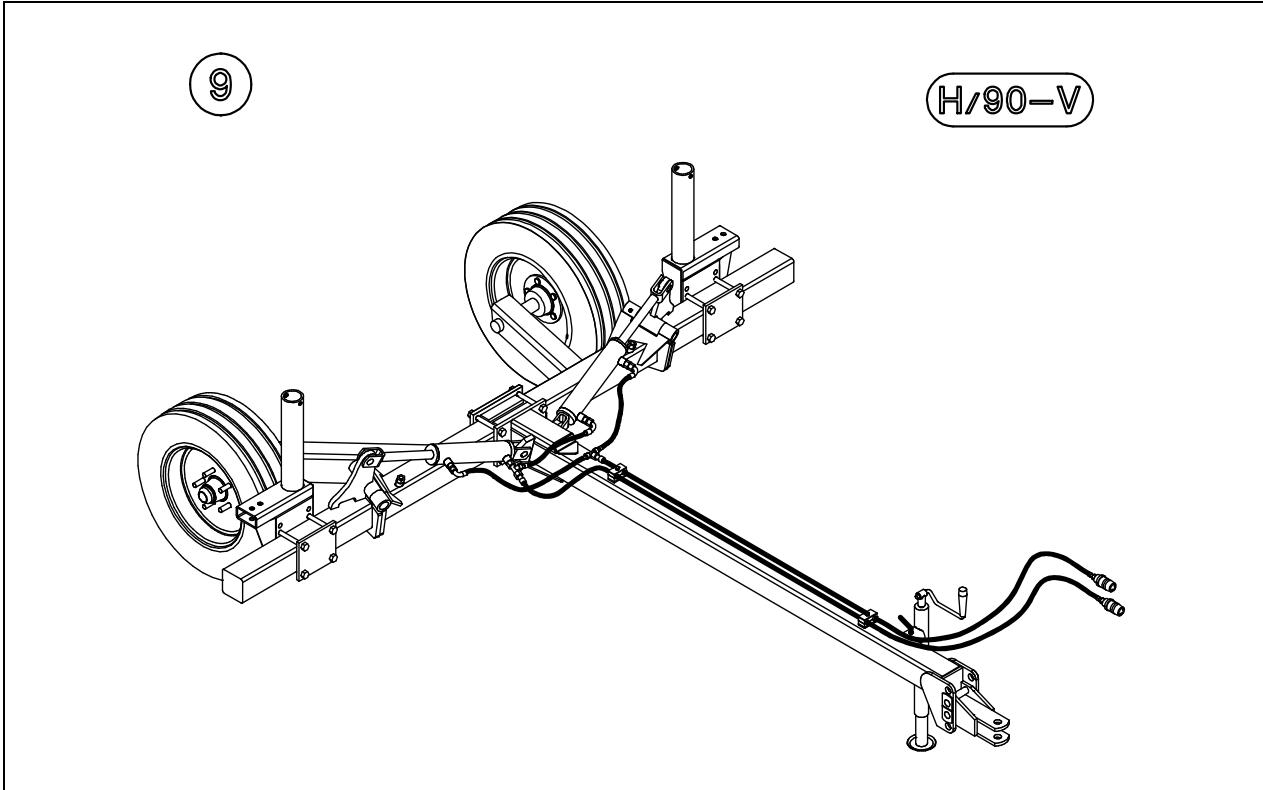

- a) Attach washers (18) and the reducer nipples (19) at holes V on cylinders (25). If the reducer nipple (19) is an "A" type, attached the side with the reduced hole towards hole V on cylinders (25). If nipple (19) is a "B" type, either side can be connected (See detail).
- b) Attach the curved end of pipes (16) to the reducer nipples (19) and join them at them at center with pipe union (22).
- c) Attach washer (18) and the normal hole nipple (20) at holes X on cylinder (25).
- d) Attach washer (18) the rotating union (21) and union (22) to hole (Z) on the other cylinder (25).
- e) Connect the curved end of pipe (17) to nipple (20) and the straight end to union (22)
- f) Connect the rotating female ends of pipes (15) to union (22)
- g) Place washers (23) and connect the quick-release coupling (24) to the straight male ends of pipes (15)
- h) Check to make sure that all connections are correctly fastened.
- i) Attach the hose collar (54) to the lugs on drawbar, fastening on correctly position (see step 9)

8/1) Fasten supports (8) and (10) to the frame using plates (34), screws (27) and nuts (29). Supports (8) and (10) can also be attached by passing the screws through slot (M). This position is useful in particular for model V/8.

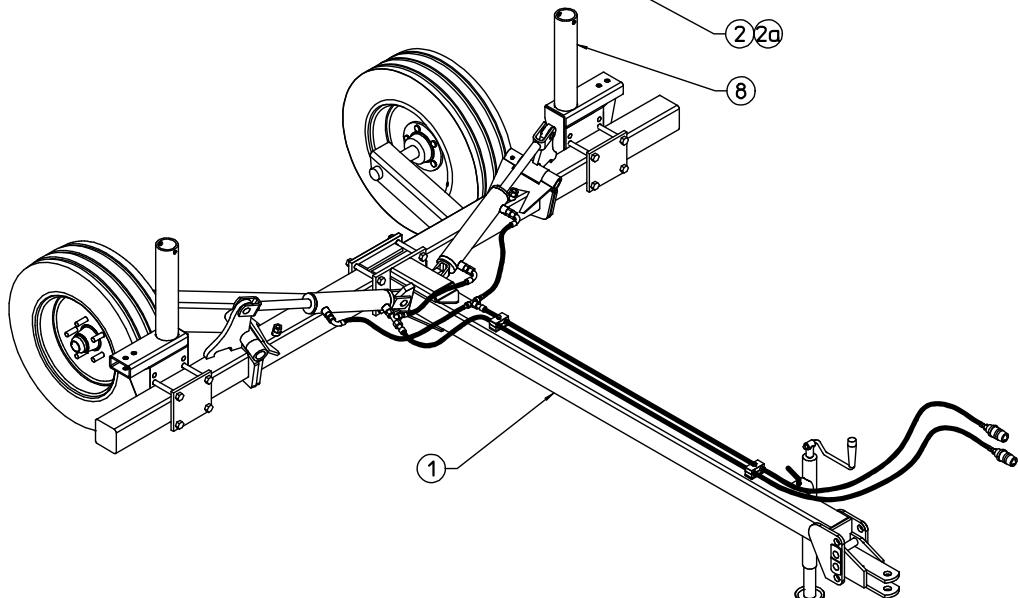

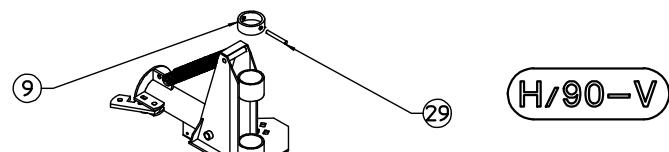

9) The H/90 cart is now completely assembled and we can begin the assembly of the hay rakes.

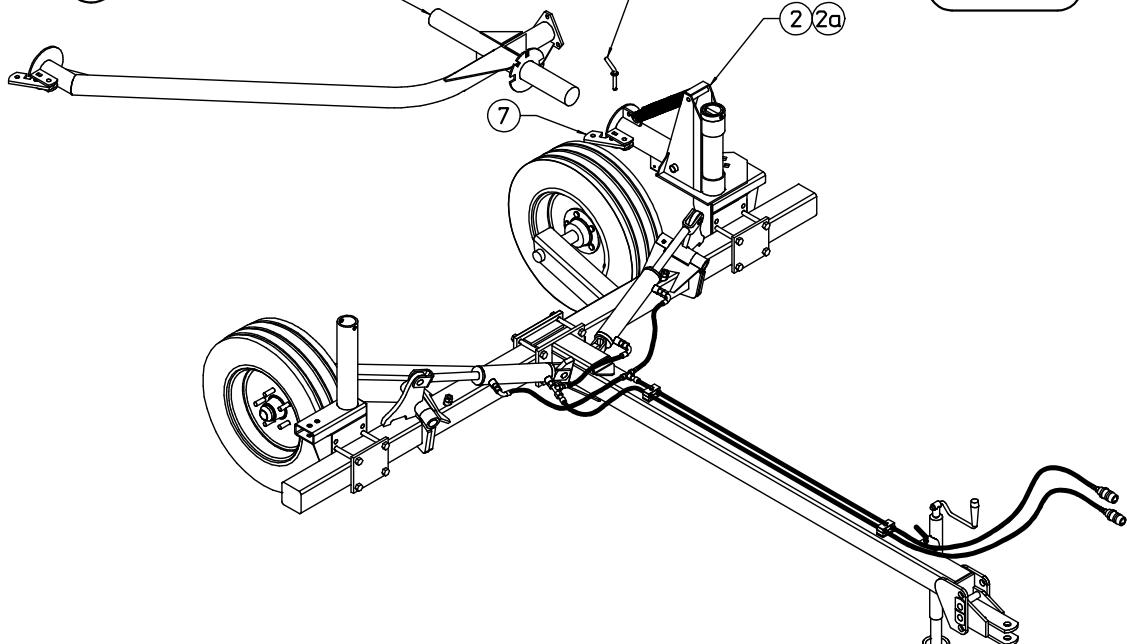

10) Place the pivoting bracket 2-2a (LH-RH, looking at the machine from the rear) over support (8), fastening it with the bushing (9) and the spring pin (29).

10

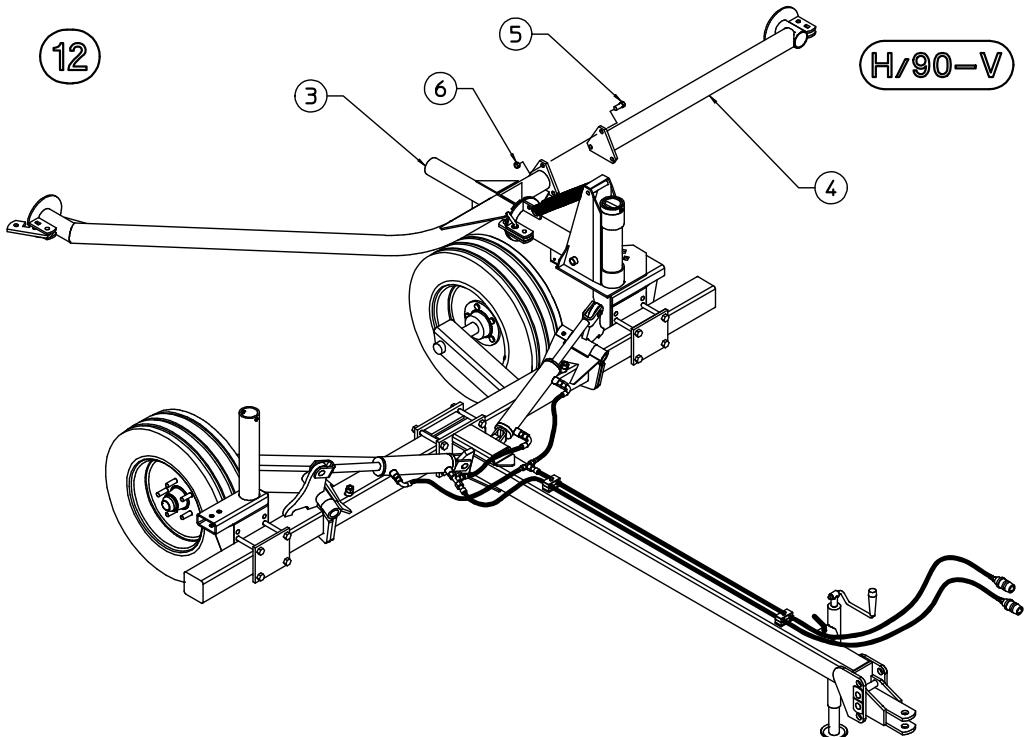

11) Attach arm (3) to the pivoting bracket (2) and fasten with lever (7) and pin (4). Shown in the illustration is the V/10 hay rake; the same procedure applies to the V/8 and V/12.

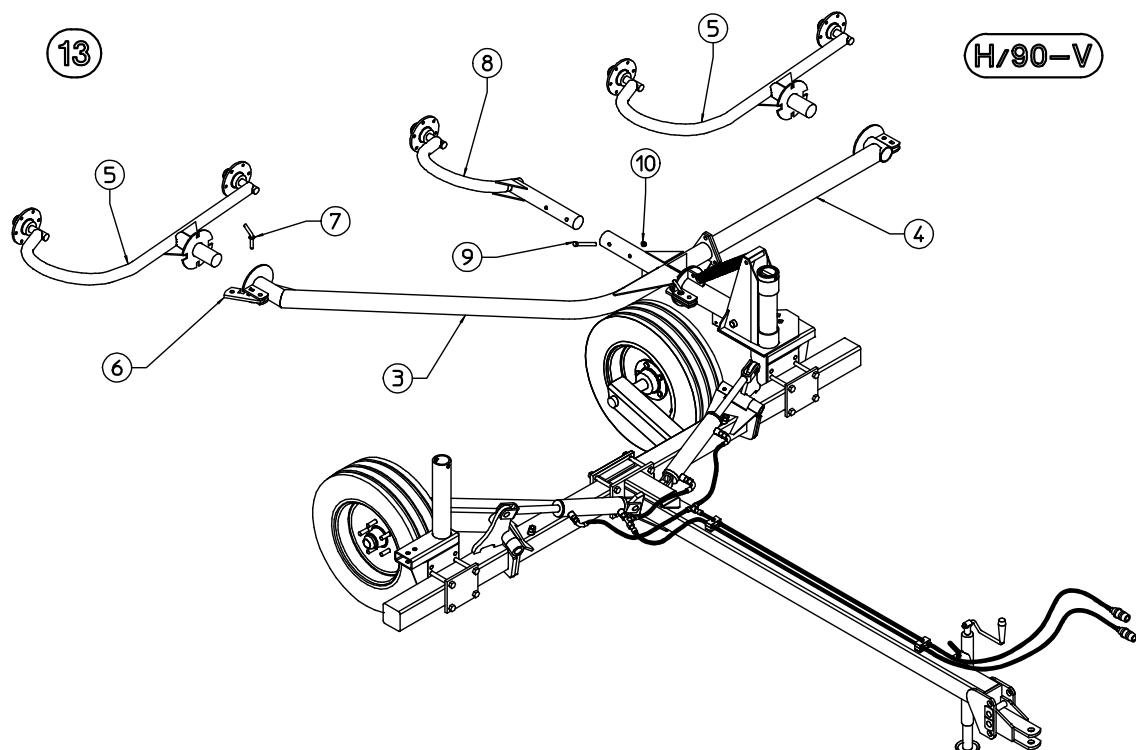

11

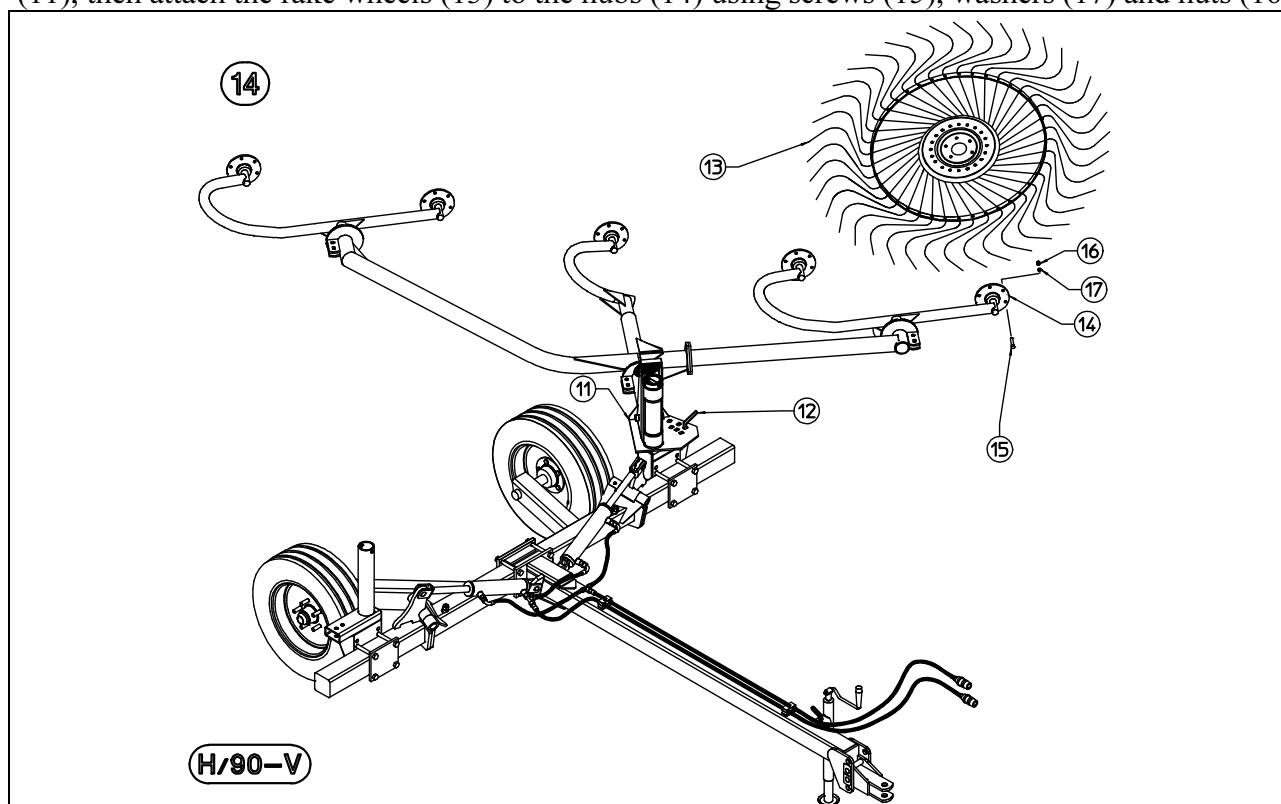

12) Attach arm (4) to arm (3) using screws (5) and nuts (6). (V/10 and V/12 only)

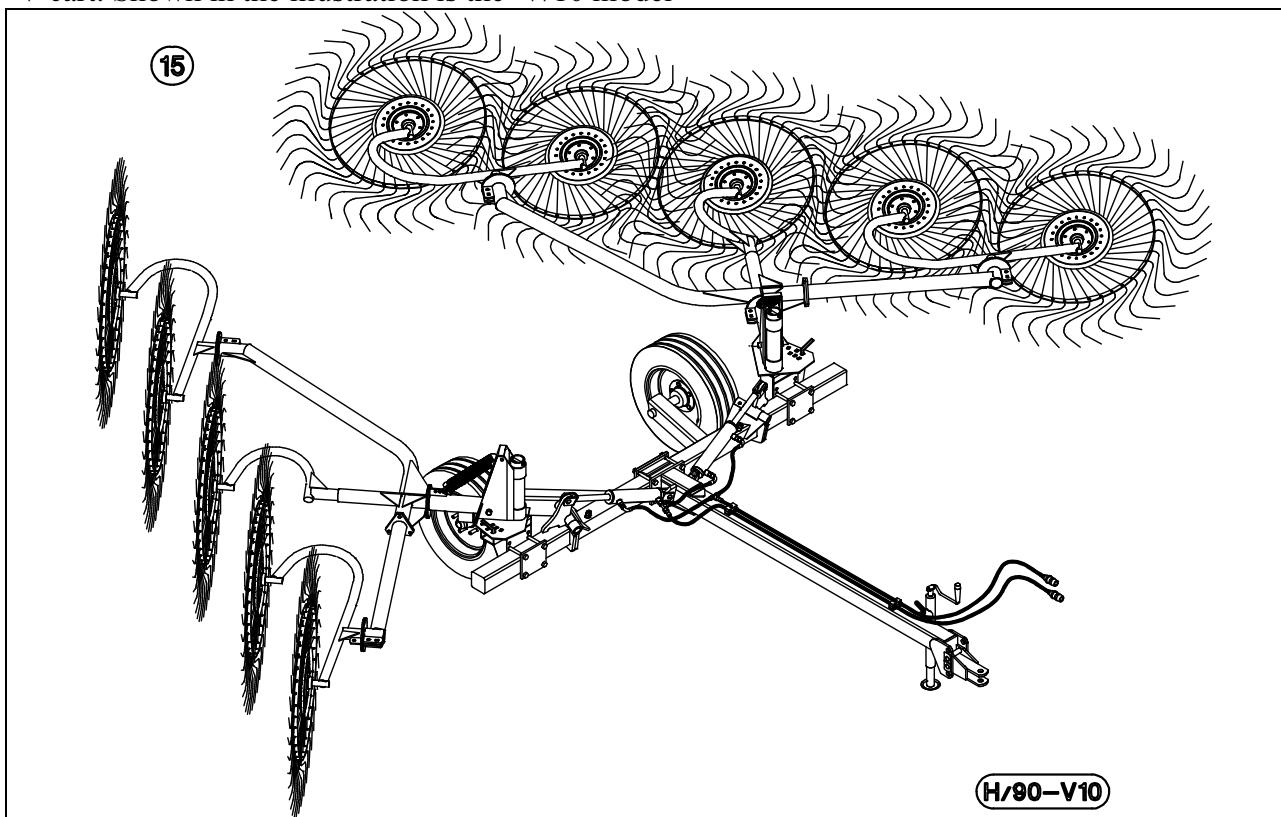

13) Attach brackets (5) to arms (3) and (4), fastening with levers (6) and pins (7). Attach bracket (8) with screws (9) and nuts (10).

14) Position the hay rake arm so that pin (12) can be inserted in one of the holes on the quadrant (11), then attach the rake wheels (13) to the hubs (14) using screws (15), washers (17) and nuts (16).

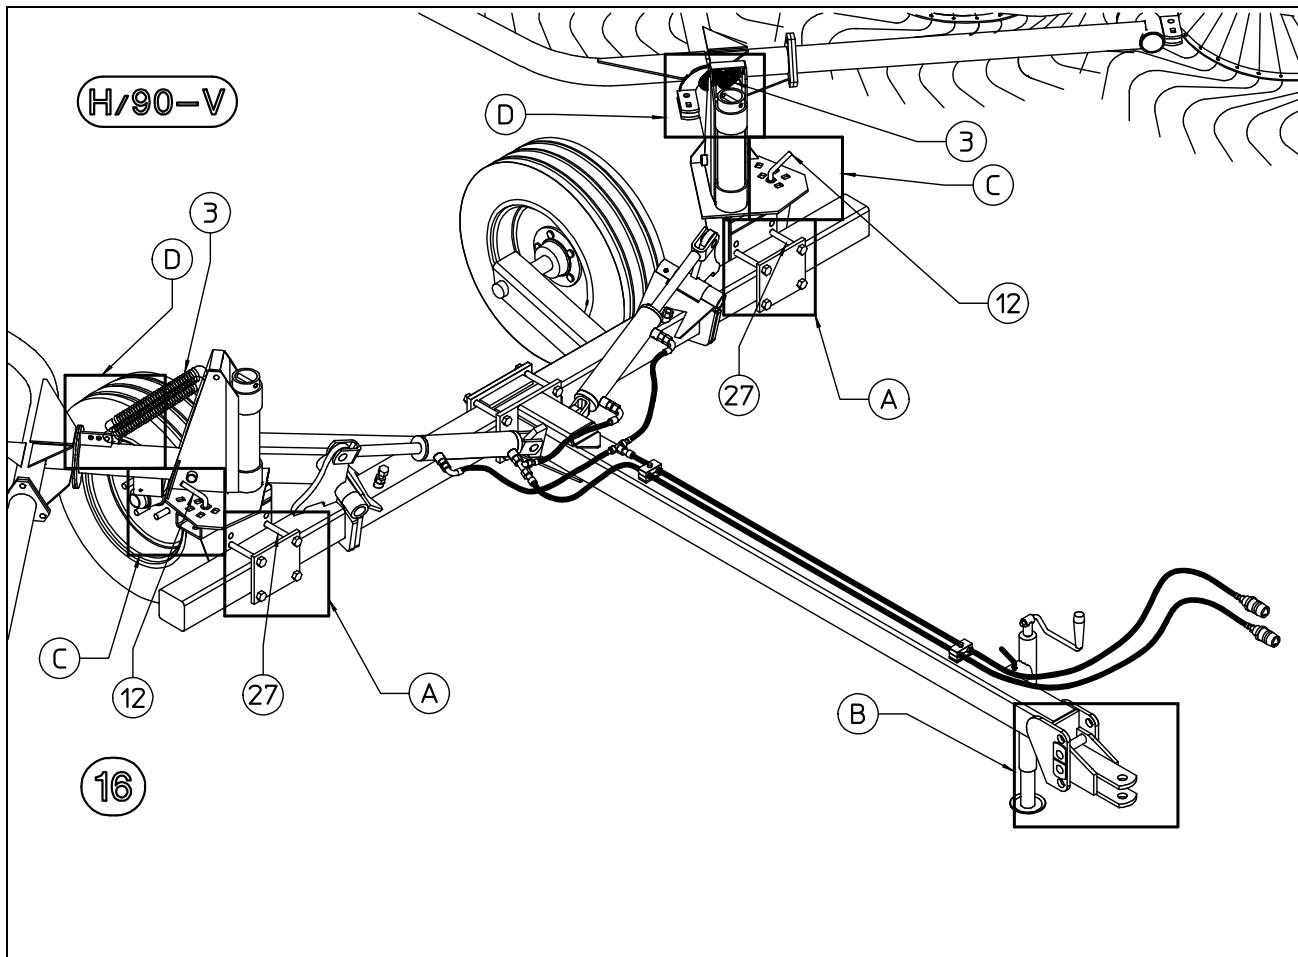

15) Repeat the procedures for steps 10 to 14 on the right side of the machine to complete the H/90-V cart. Shown in the illustration is the V/10 model

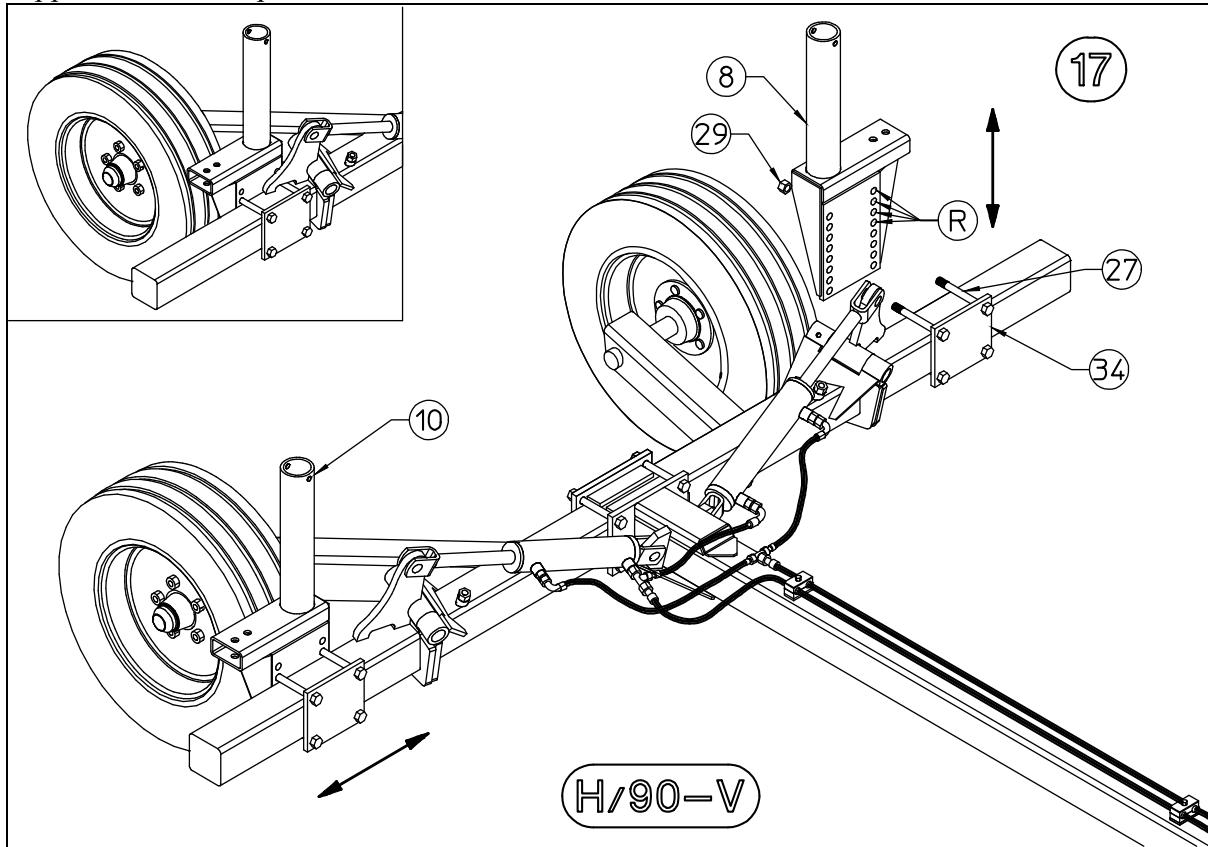

ADJUSTMENTS FOR MACHINE USE

The machine must be adjusted according to the specific work requirements. Thus the various adjustment possibilities will be described, so you can choose that which best suits your work requirements.

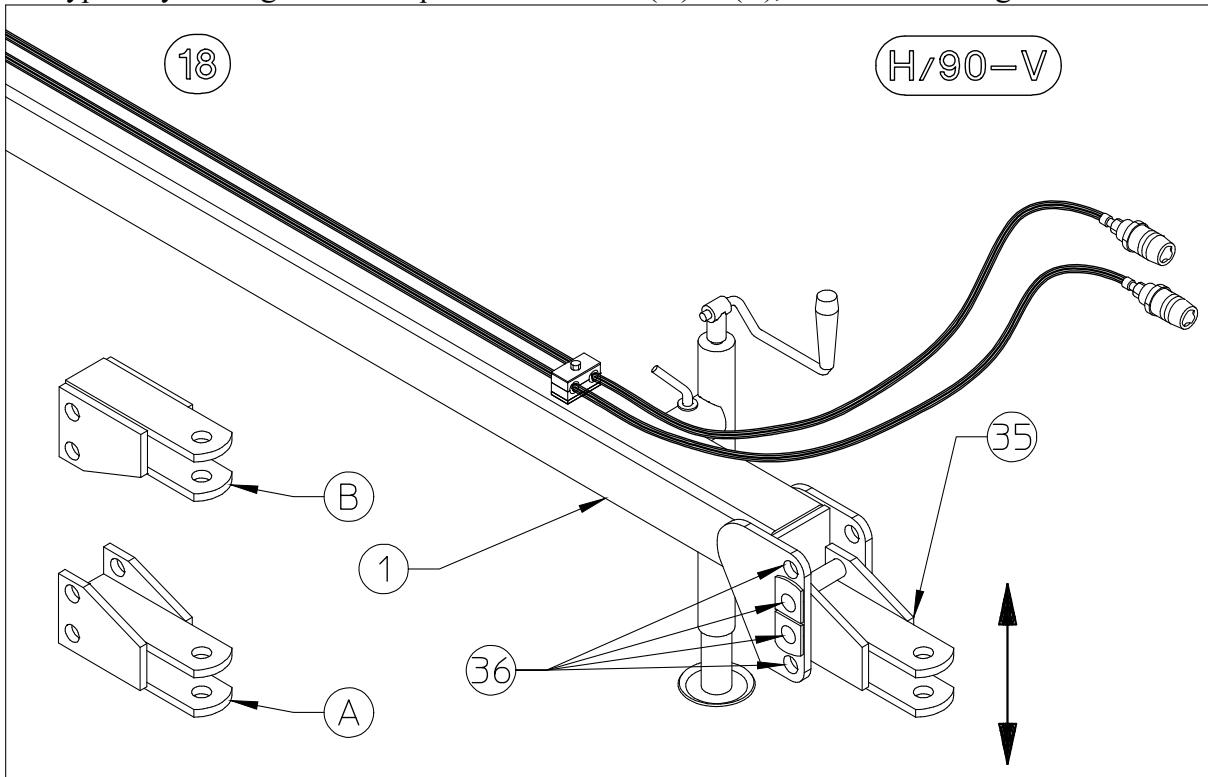

- A) The hay rake supports can be adjusted vertically and horizontally by inserting the screws (27) into the different holes on the support and by sliding the support lengthwise along the frame.
- B) The tractor hitch must be adapted to the tow hook on the tractor and adjusted according to the pressure of the rake wheels on the ground.
- C) The hay rake arms can be pivoted and locked into different positions using pin (12).
- D) The pressure of the rake wheels on the ground can be regulated also by means of the suspension springs (3), which can be set in different positions.

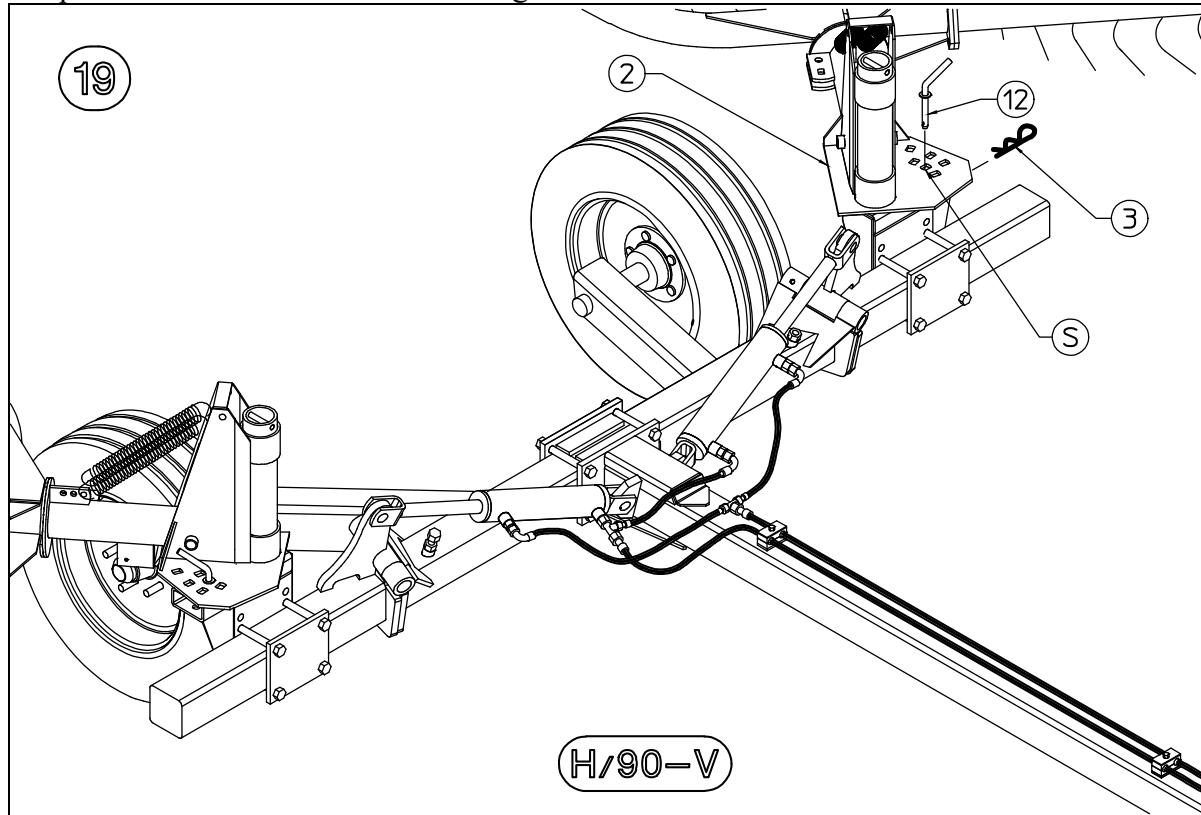

17) The support arms (8) and (10) can be adjusted in height by placing the screws (27) in the different holes (R) and in width by sliding the support along the frame before tightening the screws. The narrowest position is with the screws passing through the slot. The adjustments depend on the pressure of the rake wheels on the ground and the desired swath width. For the V/8 it is best to set all supports at the low position.

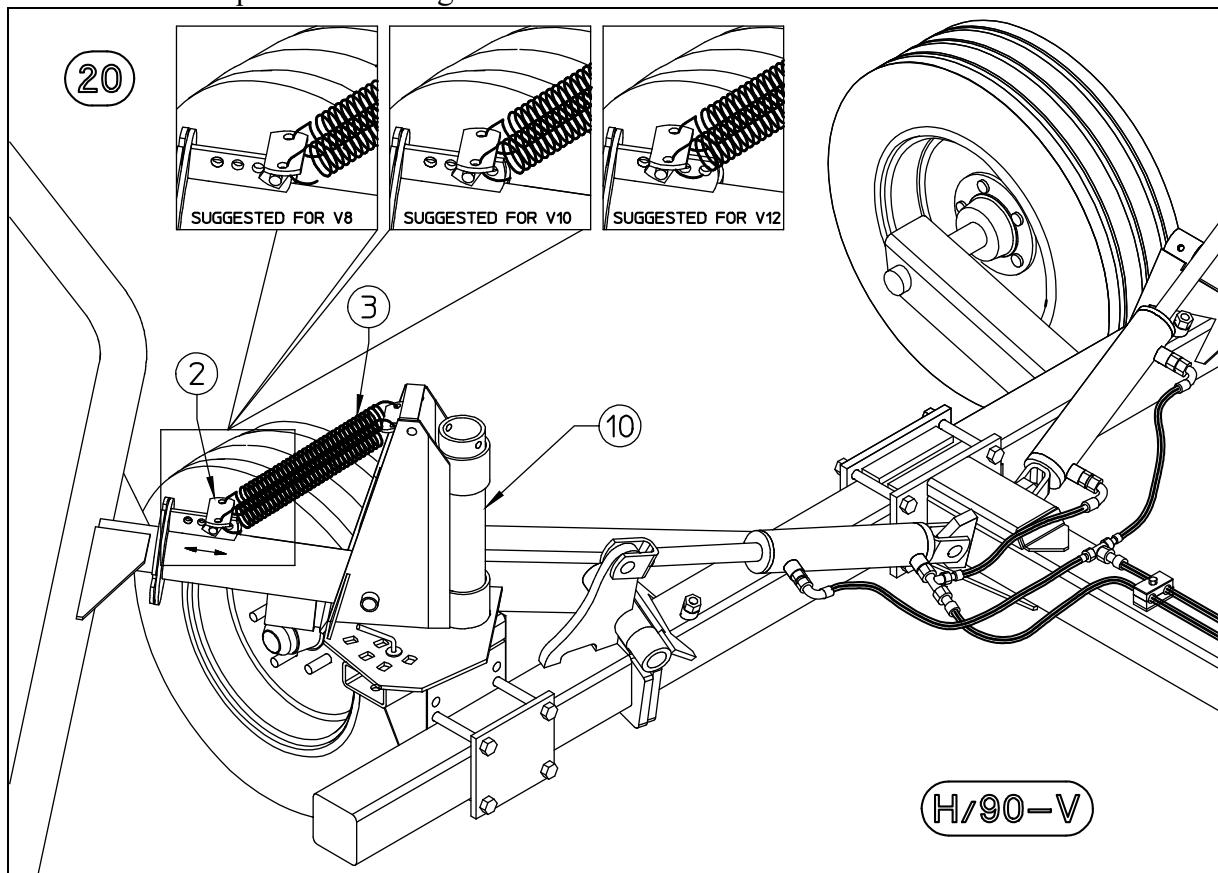

18) The tractor hitch (35) can be set in different positions, using holes (36), to allow coupling to all tractor types. By turning the hitch upside-down from (A) to (B), additional settings are available.

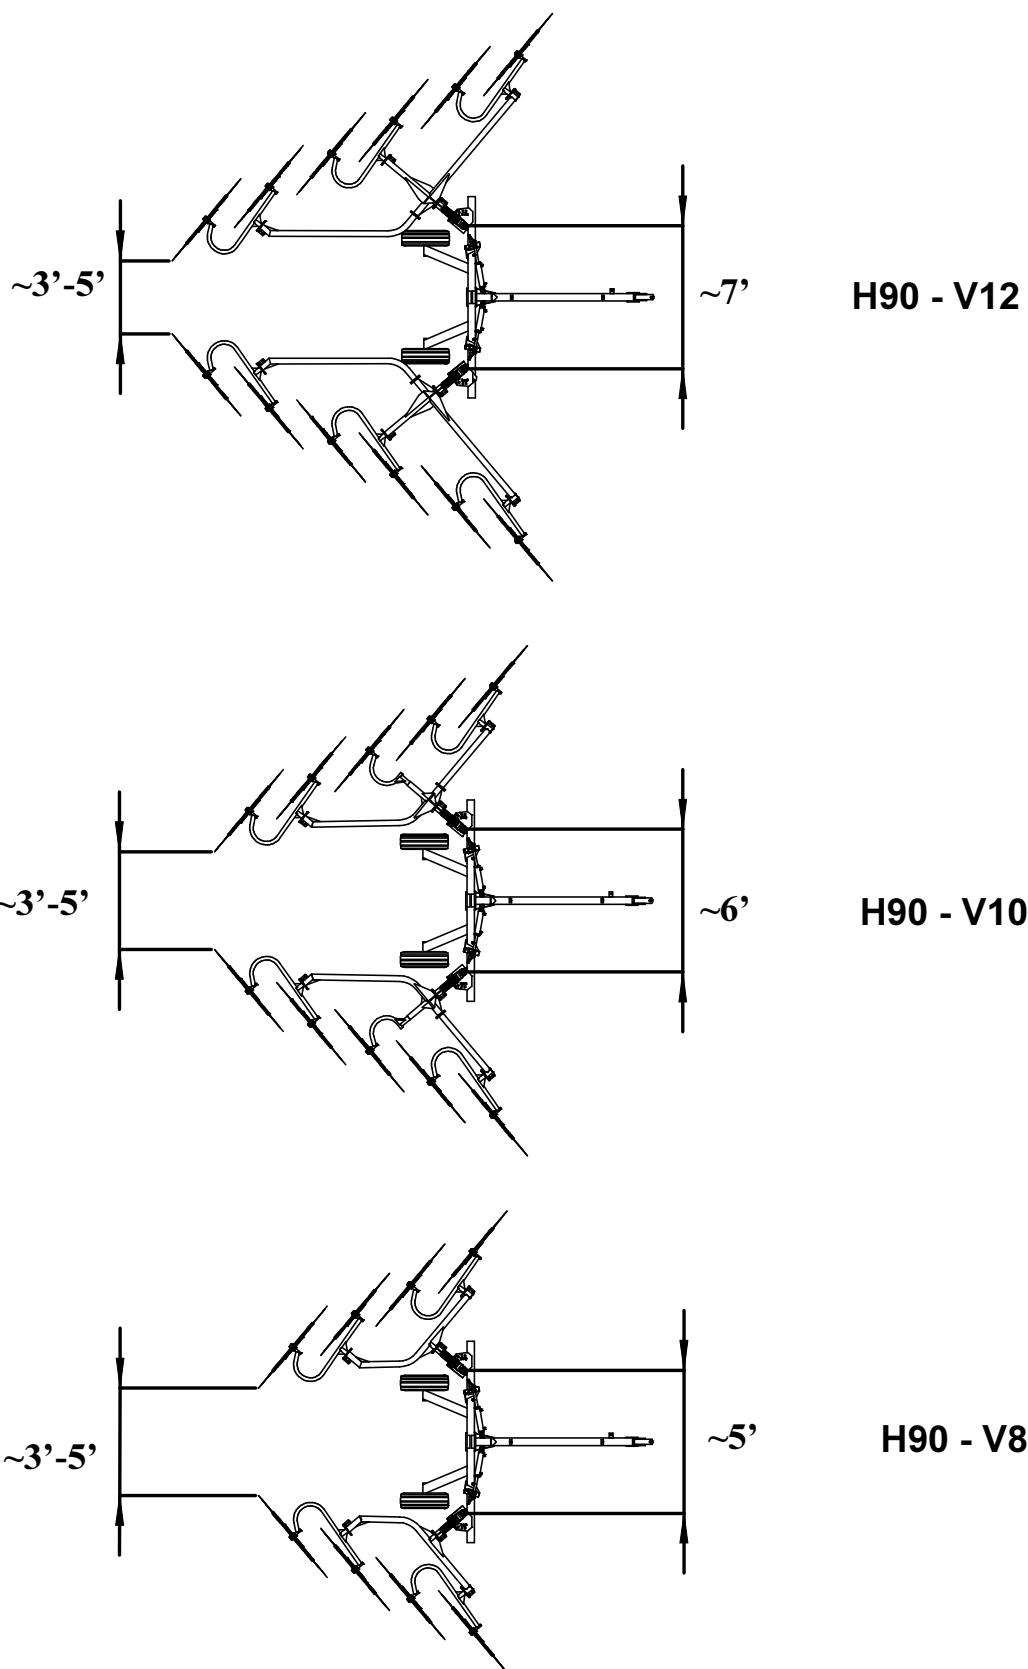

19) The hay rake arm can be pivoted to obtain a different working angle and further variation of the swath. Pin (12) is inserted in the different holes in quadrant (2) and fastened with the clip (3). The central position is the best for most working conditions.

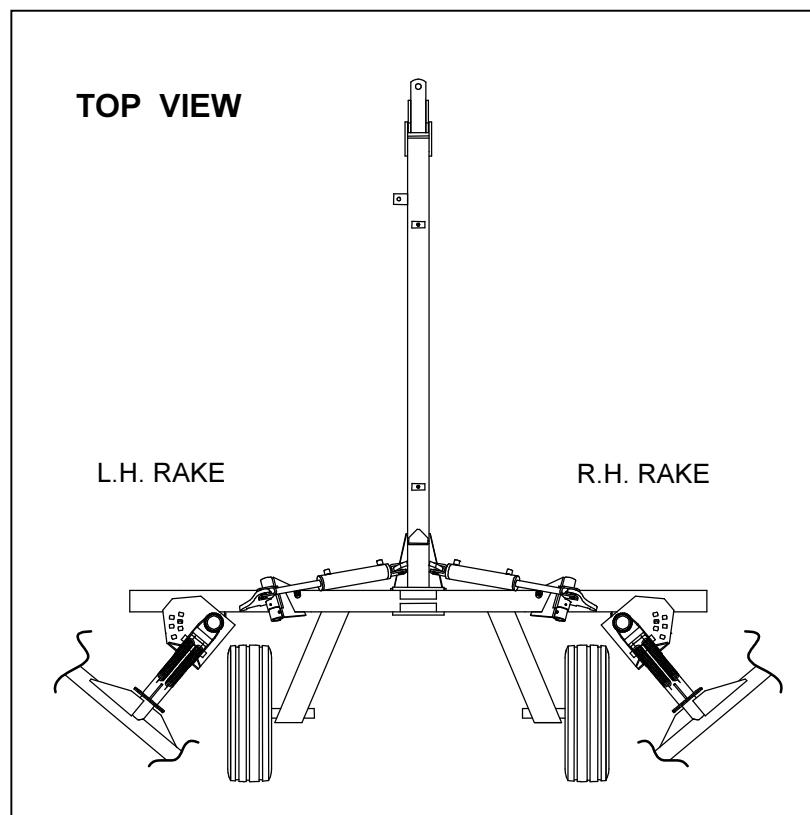

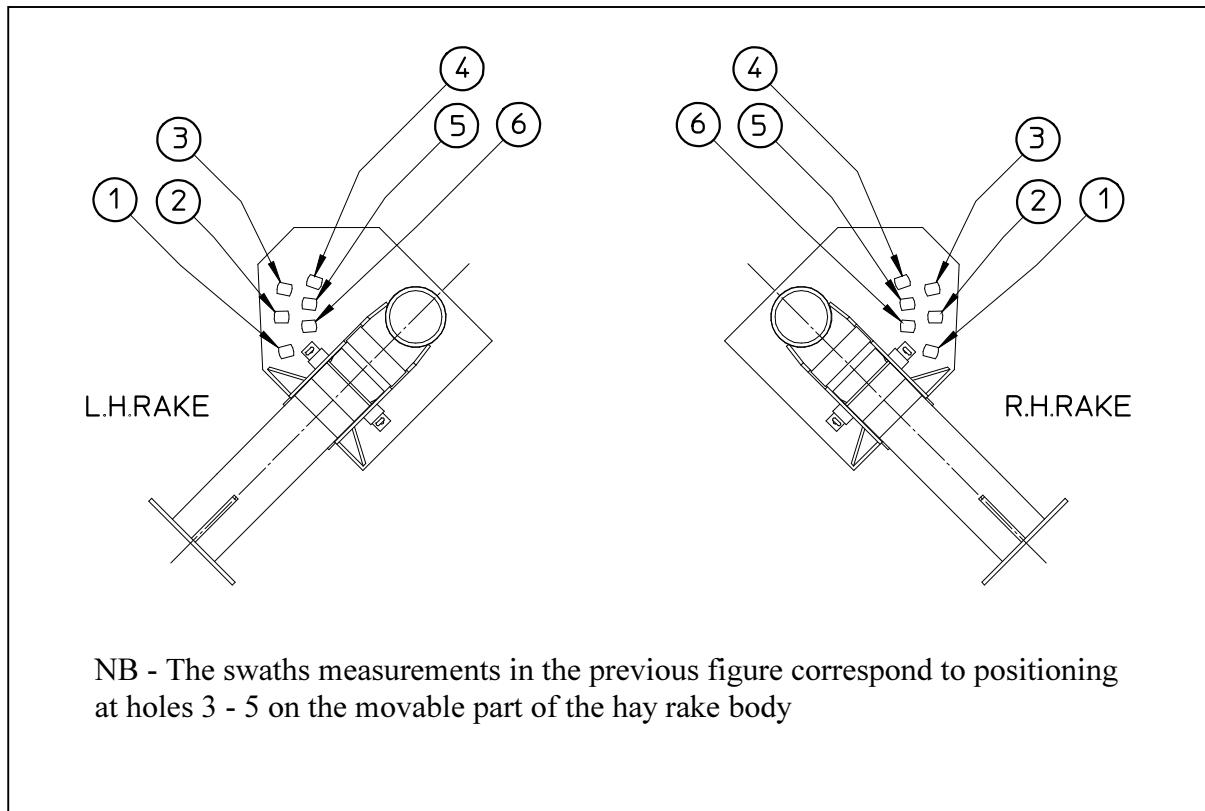

20) The springs (3) should normally be attached as shown in the large illustration and in the detail at the upper left (attached at the second hole). They can be attached to the other three holes to obtain a different rake wheel pressure on the ground.

Here we indicate the approximate measurements for the assembly of the RP/8 - RP/10 - RP/12 and the corresponding swaths sizes.

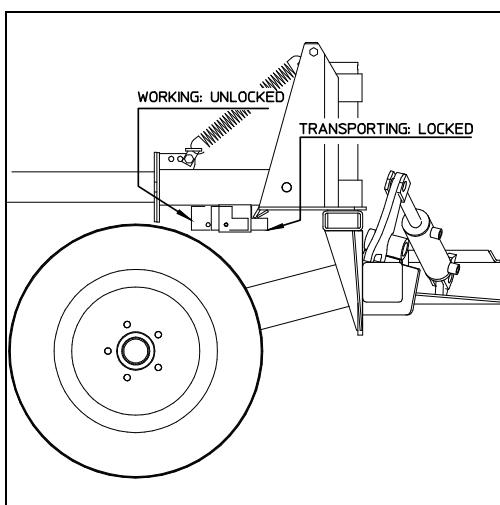

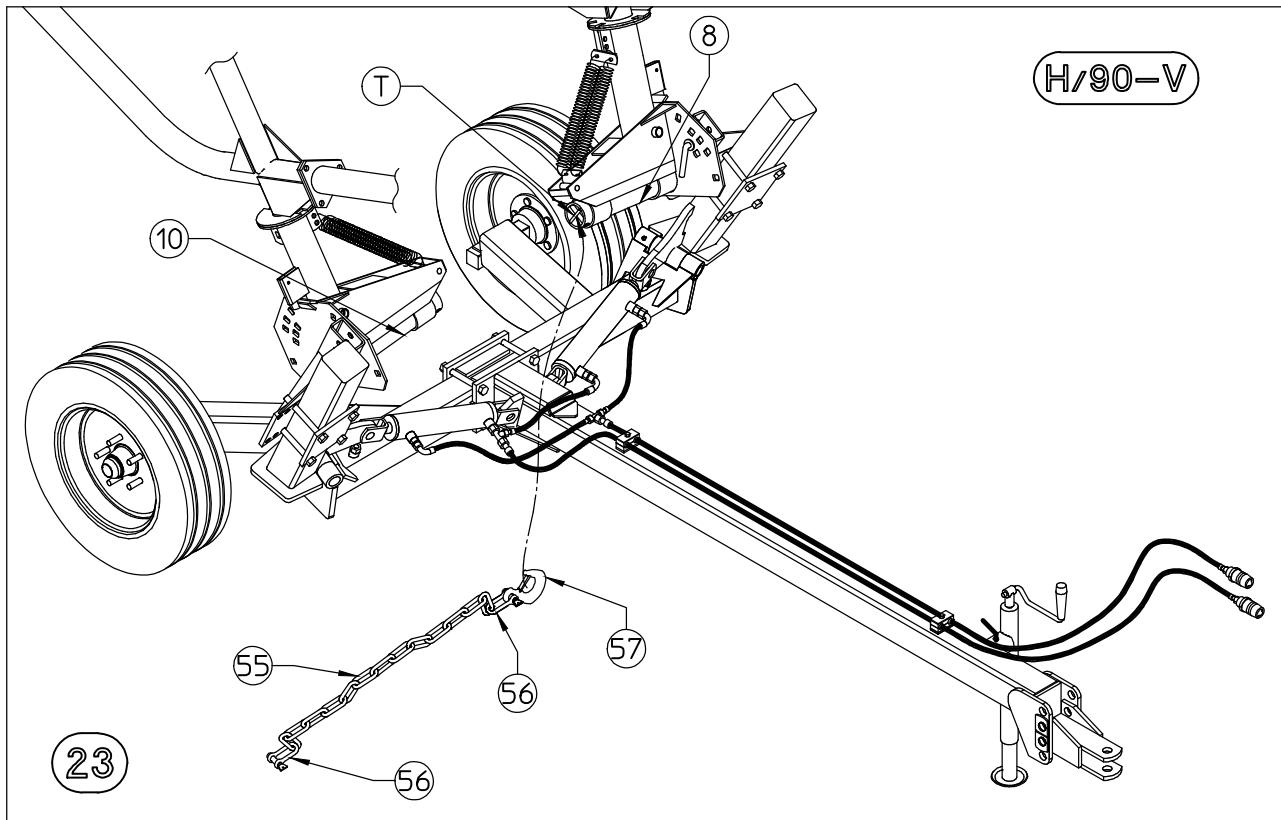

23) To transport the machine, it is necessary to raise the hay rakes, which can be done from the tractor using the distributor lever. It is not necessary to move the hay rakes from the working position in order to raise them.

For safety reasons, after raising the side arms attach the chain (55) to the two supports (8) and (10) by connecting the hooks (56) and (57) to the welded chain ring (T).

Warning: The chain **MUST** be removed before putting the arms back into the working position.

When moving a short distance in the field, it is not necessary to lock the hay rakes with the chain (55); however, when leaving the field, the safety locks **must be used**.

While transporting the machine, the safety locks must always be locked, and while working, the safety locks must always be unlocked

TROUBLES	CAUSES	REMEDIES
1) Wheel does not unload hay.	1) New tine, too much paint on it.	1) Have the wheels be turning on gravelly soil until the tine is clean again.
	2) Mud on tine point due to moist soil.	2) The wheels are too close to the ground.
2) Tine failure.	1) Going backwards with wheels not lifted.	1) Lift the wheels before going backwards.
	2) Too much pressure on the wheels.	2) Lightly lift the rake.
	3) Tine rusted.	3) Protect it by oiling.
3) The rake does not collect the hay.	1) Tine worn out.	1) Replace it. We recommend to replace all tines for uniform height.
4) Too much floating of wheels.	1) Wheels too far from ground.	1) Lightly lower the rake.
5) Bent tine.	1) Going backwards with the wheels not lifted.	1) Lift the wheels before going backwards.
	2) Too much speed on rough soil.	2) Reduce speed.
	3) Going across deep and narrow ditches or prominences.	3) Reduce speed.
	4) Too much weight on the wheels.	4) Lightly lift the rake.

MAINTENANCE

The machine has only two greasing points as shown in relevant picture. No maintenance is required for all bearings, wheel hubs (equipped with 1st quality taper roller bearings and protected with a dust cover) and all setting operations. No special tools are therefore required for servicing.

However, when the season is over, we recommend to clean the implement, to protect it from rust by oiling and store it until next season.
